

Perspectives of Development under Climate Change and the need to Invest in a Climate Resilient Future

Dr. Brilliant M. Petja
Water Research Commission

Executive Summary

Climate change is emerging as one of the most challenging issues in the global arena within the political and scientific context. It brings significant changes that affect development in all the sectors. Evidence show a record increase in natural disasters and extreme weather events. This paper touches on the developmental aspects of climate change and the need to increase resilience.
